DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 25 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear how to access the information.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 18 is rejected under 35 U.S.C. 102(a) as being anticipated by Bouse (US 2004/0019461).

Claim 18 is rejected under 35 U.S.C. 102(a) as being anticipated by Koerner (US 6820548).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3747

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 19, 20, 24-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bouse (US 2004/0019461). Bouse discloses an outboard motor with a fault indicator in an internal combustion engine. A feedback signal is used to control the operational condition of the motor. The differences between the prior art reference and the instant invention are the use of a visual feedback and the recordable medium accessible to technician. It would have been considered to be an obvious choice of mechanical design because one skilled in this art is familiar with basic control mechanic and normally has the laboratory test facilities. To optimize or select the suitable feedback control would be within the ability of ordinary skilled in this art.

Allowable Subject Matter

Claims 21-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
